

## Ceiling Projector Box

All aluminum 24" X 24" X 12" h white powder coated ceiling projector box. Drops right into a 2'X2' ceiling grid. This box allows small to medium projectors to hang out of sight and become completely enclosed. Unique hanging plate is suspended inside the box and mounts your projector with a single nylon strap. The 4 threaded adjusters allow complete adjustment from pitch and yaw and this is done from outside of the box. The projector is secured on the ground and then the entire box is placed in the grid. Seismic cables are required to secure the box and local code will dictate power connections. The top of the box has been punched for a NEMA code 110 V AC outlet box and will when properly sealed provide the type of seal required for plenum rated ceilings. There's plenty of room inside for a power strip and even small sound systems. If the back panel is going to be installed (the back panel is included) the optional 20 cfm fan is recommended to power vent the enclosure.

All aluminum 24" X 24" ceiling projector box rear view

Ceiling projector box inside view

Ceiling projector box power vent fan installed on back (optional).

*\*Not recommended for ceilings over 11 ft high when aimed at screens less than 36" off of the floor. The angle of projection might cause distortion. Also remember the ceiling grid will determine the placement of this enclosure. It is preferred that a centered screen shot be maintained for best results from your projector. Consult a certified AV installer for best results.*
